MANIPro Passport

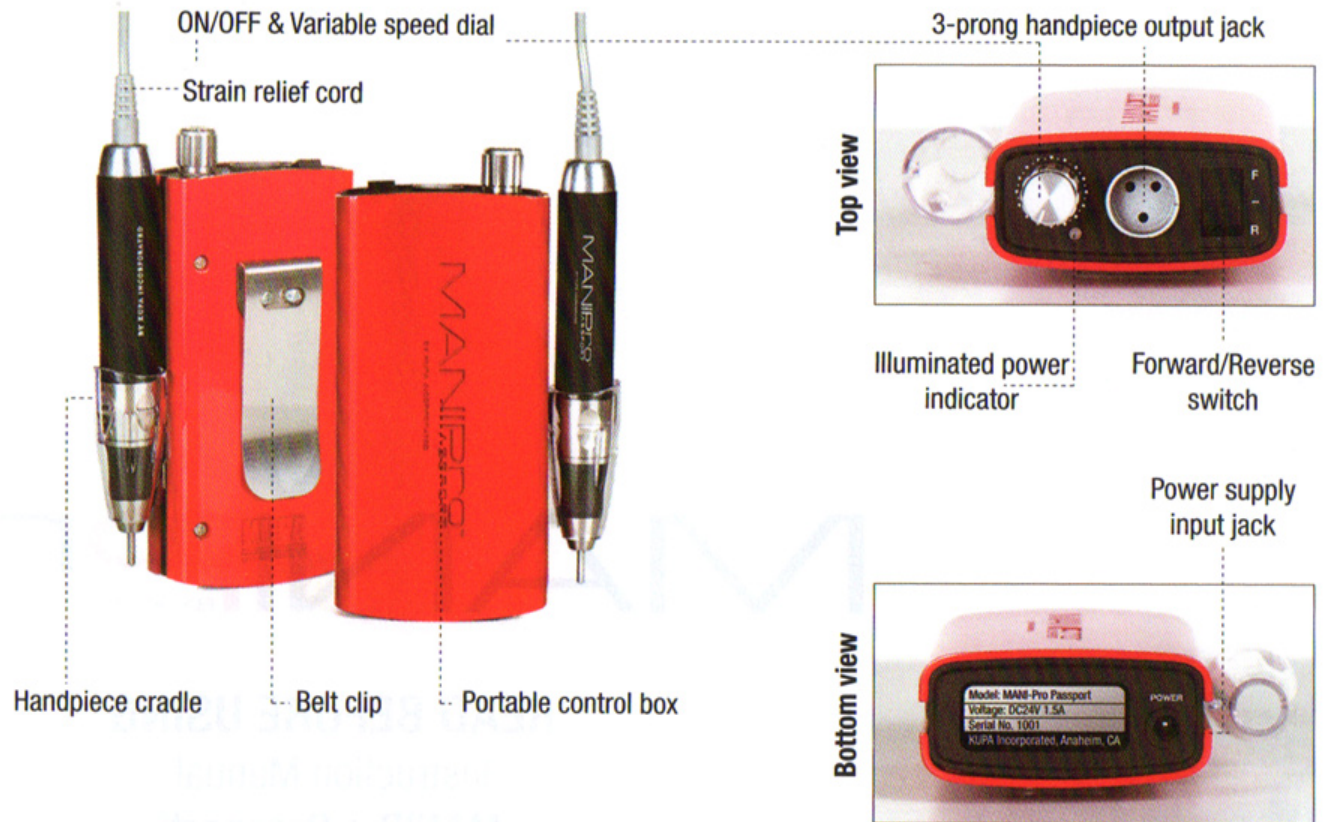

Congratulations on your purchase of KUPA's MANIPro Passport. The Passport features a lightweight battery power control box that can provide up to 8-10 hours of use per charge in either 110v or 220v. The control box has an illuminated power indicator, variable speed dial, forward and reverse button, and is available in standard colors red, white and purple. The Passport comes complete with a built-in handpiece cradle and belt clip.

8-10 Hours of Battery Life
Variable speed control
High torque / 30,000 RPM
Quick charge system - full charge in 2 hours
Automatic switching 110/220 volts
One year limited warranty

Using the MANIPro Passport

1. Prior to use, make sure the battery is charged by plugging the MANIPro Passport to its power supply.
2. Once charged, plug the handpiece into the 3-prong output jack located at the top of the machine.
3. Twist open the chuck and install a standard 3/32" bit into the collet, then twist to close. (see how to install/take out a bit section)
4. Turn "ON" the machine by rotating the variable speed dial clockwise. **IMPORTANT! DO NOT** operate the electric file without a bit or blank in the handpiece.
5. Select the speed by turning the variable knob, clockwise to increase speed, counter clockwise to reduce speed.
6. Hold the handpiece as indicated in the photo for proper control (see pg. 5—The Proper Way to Hold a Handpiece)
Note: Proper support of the machine and the nail to be filed is important for safety and control.
7. **IMPORTANT!** Always turn off the MANIPro Passport when not in use.
8. **CAUTION!** Avoid danger, unplug charger once it is fully charged (the red light turns green).

MANIPro KP-55 Handpiece

MANIPro KP-55 are manufactured from durable stainless steel, each features a small nose and rubbergrip, with a small lightweight body diameter. The KP-55 handpiece has a dynamically tuned coreless motor manufactured in Japan to exacting standards. Featuring 2 high speed precision ground bearings that allow it to operate at very high speed, 30,000 RPM with virtually no vibration!

The KP-55 is our latest offering, featuring our exquisite diamond pattern design inspired by "Mont Blanc" precision writing instruments.

Both come complete with our new molded strain relief flat power cord, compatible with MANIPro Passport control boxes.

THE PROPER WAY TO HOLD A HANDPIECE

For complete control during e-filing, position your index finger on the rubber grip area just above the nose of the handpiece. Hold the handpiece like you would hold a pen or a marker. Be sure to place your forearms on the table and balance your hands by using the fulcrum finger, which takes the pressure off the bit and gives you more control.

IMPORTANT! DO NOT operate the electric file without a bit or blank in the handpiece.

MANIPro KP-55 Handpiece

MANIPro KP-60 Handpiece

Manufactured from durable stainless steel, the KP-60 is our lightest, fastest most elegant handpiece. A precision handcrafted instrument with amazing speed, torque and durability. Sleek, ergonomic and vibration free with an ultra high speed coreless motor, manufactured in Japan. Beautiful contemporary design, featuring KUPA's exclusive diamond pattern finish. Inspired by makers of "Mont Blanc" precision writing instruments! Designed for professional nail techs with high expectations and discriminating taste!

Our smallest Handpiece yet! At a total length of 4.25", a slim body diameter 0.8" and lightest 4.23 oz. Handpiece. 25,000 RPM with virtually no vibration! It has a molded strain relief cord and is compatible with MANIPro Passport Control Box. One year limited warranty.

THE PROPER WAY TO HOLD A HANDPIECE

For complete control during e-filing, position your index finger on the rubber grip area just above the nose of the handpiece. Hold the handpiece like you would hold a pen or a marker. Be sure to place your forearms on the table and balance your hands by using the fulcrum finger, which takes the pressure off the bit and gives you more control.

IMPORTANT! DO NOT operate the electric file without a bit or blank in the handpiece

MANIPro KP-60 Handpiece

HOW TO INSTALL & TAKE OUT A BIT

For MANIPro Passport KP-55 & KP-60 Handpiece

How to install a bit

1. Make sure the switch is on the "OFF" position before inserting any bit.
2. Clean, disinfect and completely DRY all bits before inserting into the handpiece.
3. Twist the locking chuck to open the collet.
4. Place a standard 3/32" bit into the open collet and twist the locking chuck until it clicks and is tightly locked.
5. You may now press the "ON" switch to start the electric file.

How to take out a bit

1. Make sure to turn "OFF" the electric file.
2. Twist the locking chuck to open the collet.
3. Remove the bit and replace with the Blank pin, twist the locking chuck until it clicks and is tightly locked.*

***IMPORTANT! Why should I replace the Blank pin in my handpiece when it is not in use?**

The Blank pin in the handpiece keeps the collet straight and protected from bending or damages. If the collet is bent or damaged, inserted bits will not spin straight and may cause injury. By inserting a Blank pin in the handpiece during non-use, it will keep the collet straight and your handpiece protected.

SAFETY

Read all safety instructions before using the The MANIPro Passport, MANIPro KP-55 & KP-60 Handpiece.

- Do not use electric file if the switch does not turn it "ON" or "OFF"
- When idle, store electric file out of reach of children and other untrained persons
- Before each use, check electric file for misalignment, broken parts and bindings or any other condition that may affect the e-file. If damaged, have the electric file serviced by a qualified KUPA technician
- Turn off an unattended running electric file

WARNING! Reduce the risk of electric shock, fire or injury.

- MANIPro Passport comes with a power adapter that has the capability to use either 110v or 220v
- Avoid storing or placing an electric file where it can fall in a tub, sink or toilet
- Do not reach for an electric file that has fallen into water. Unplug immediately
- Do not use an electric file if the cord or plug is damaged
- Do not operate the electric file if it is not in proper working condition
- Do not operate the electric file if it is submerged in water or any other liquid
- Avoid excessive bending or pulling of the cord. Keep all cords away from heated surfaces

Disclaimer

This electric filing system is designed for use in the application of artificial nail extension products, natural nails and pedicures. It's use is recommended for licensed, professionally trained nail technicians only!

All other uses or application of this product are not recommended and will void all manufacturer's warranties.

EXTENDED WARRANTY & PROTECTION PLAN

All KUPA E-FILES come with a one year manufacturer's limited warranty. Get peace of mind and extend your coverage even further with a **KUPA Extended Warranty & Protection Plan**. This extended coverage is the best protection plan in the industry because it goes above and beyond the manufacturer's Limited Warranty.

TERMS

With an extended warranty, your entire E-File is protected. KUPA Extended Warranty & Protection Plan can only be activated within the first year of the purchase of your E-File. **YOU MUST REGISTER YOUR E-FILE** in order to purchase an Extended Warranty & Protection Plan.

For Models: MANIPro Passport® Plus, MANIPro Passport®

Coverage includes any potential manufacturer's defect as well as the necessary annual service to repair your handpiece.

In the event of an accidental damage... It's Covered!

- * Dropped handpiece... **It's Covered!**
- * Liquid spills on handpiece ... **It's Covered!**
- * We cover accidents, no questions asked... **It's Covered!**

Protection even from everyday normal use... It's Covered!

- * Should a broken bit get stuck in the handpiece ... **It's Covered!**
- * Clean bearings when they are full of powder or gel ... **It's Covered!**
